## **HEAT EXCHANGER BLOCK**

### **ABSTRACT OF THE DISCLOSURE**

5 A heat exchanger block including at least two heat exchangers each  
consisting of a pair of longitudinal headers with tubes extending between the  
headers, at least some of which are aluminum cast parts. Adjacent heat  
exchangers are detachably connected at adjacent ends of their headers wherein  
one of the adjacent headers includes a recessed portion in the adjacent end and  
the other of the adjacent headers includes a flange receivable in the recess of the  
one header. Matching holes extend through the flange and the one header end,  
10 and a fastener extends through the matching holes in the ends of at least one set  
of adjacent headers. Shroud attachments are along a longitudinal wall of at least  
one of the longitudinal headers.
